

# Bulk actions

[bulk](#), [action](#), [operation](#)

In CzechIdM GUI there exist bulk actions on objects like

- Identities
- Roles
- Organisations

One can filter identities, select all of them or only some and invoke bulk action like

- Delete identity
- Assign or remove roles
- Disable manually

Usually bulk actions are performed asynchronously (identities, roles) as long running task, so one can see its progress on LRT agenda.
