Known issues

This section is intended to contain the list of known issues that are not quick to solve i.e. those that occur in included libraries. If possible there is a workaround to the issue. This list does not replace the bugtracking tool for CzechIdM - https://redmine.czechidm.com

Model mapper

Converter lib error - Sometimes the error `org.modelmapper.MappingException: ModelMapper mapping errors: Converter org.modelmapper.internal.converter.CollectionConverter@7214dbf8 failed to convert` occures. It is caused by the bug in the library "ModelMapper". Workaround is to restart the CzechIdM system. May be fixed in new version of ModelMapper - more info at https://github.com/modelmapper/modelmapper/commit/06dcce414ad56c6d200dda67fcd2670e9933c9ed

Flyway

To prevent application startup fails due to Flyway error, property -Djava.util.Arrays.useLegacyMergeSort=true has to be added into environment properties. If property is not set, then application can fail on error:

```
Error creating bean with name 'flywayCore' defined in class path resource
[eu/bcvsolutions/idm/core/config/flyway/CoreFlywayConfig.class]:
Initialization of bean failed; nested exception is
java.lang.IllegalArgumentException: Comparison method violates its general
contract!
```

Add JAVA_OPTS parameters:

```
-Djava.util.Arrays.useLegacyMergeSort=true
```
