

# JIP/KAAS Connector

This connector can be used to connect to Czech POINT system. Communication is via API which is provided by the end system.

## Configuration

Connector has few settings which need to be configured before you used it.

### Host

You want to use one of these url. Test - <https://www.test.czechpoint.cz/spravadat/ws/>

Production - <https://www.czechpoint.cz/spravadat/ws/>

### Username

Username for account which will be used for communication with the end system.

### Password

Password for account

### Subject

Shortcut of subject

### Type of objectClass

There are two types of object which are supported in current version of connector. `\\_ACCOUNT\\_` for users and `\\_GROUP\\_` for roles If you want connect both types make two systems in IdM, with different configuration.

## Scheme generation

Schema generation is supported by connector. It will generate these schemas:

Managed user attributes

- titulyPred - firstname - surname - password - email - titulyZa - object-id - loginDisabled

Managed role types

- Přístup do Agend - Přístup do Czech POINT@office - Přístup do Virtuos - Přístup do informačních systémů - Agendové činnostní role

## Provisioning

For objectClass GROUPS provisioning is not supported because the API doesn't support it.

For objectClass ACCOUNT, the connector is supporting these operations: CREATE, UPDATE. Other operation are not supported in the API.

Change of first name and last name is possible only if the process of identification(ztotožnění in Czech) was not completed

## Synchronization

For ACCOUNT and GROUPS you need to use Reconciliation, normal synchronization is not supported in current version.

## Supported operations

Object	Operations
\\_ACCOUNT\\_	CREATE, UPDATE, READ
\\_GROUP\\_	READ
