<input type="checkbox"/>	Code ↕	Folder name ↕	Parent folder in catalog	URL	description ↕	Id
<input type="checkbox"/>	<input type="text" value="child1"/>	child folder	root		This is child folder	5bdc465
<input type="checkbox"/>	<input type="text" value="root"/>	root				cd897c3

1 - 2 of 2 records

The following attributes can be set for every folder in role catalog:

- **Code** - Is unique, required field
- **Folder name** - Is unique in catalog level, required field and has descriptive character
- **URL title** - This will be visible in Role catalog agenda in the field URL
- **URL** - Path to some site, for example if the folder will group roles for one system I can fill URL for that system. It must begin with http://
- **Parend folder in catalog** - You can choose parent folder from existing folders in Role catalog
- **description** - You can describe the purpose of this folder

New folder

Code	Folder name
<input type="text"/>	<input type="text"/>
Folder code is unique in catalog.	Descriptive attribute for users. Unique in catalog level.
URL title	URL
<input type="text"/>	<input type="text"/>
Parent folder in catalog	
<input type="text" value="Select or type to search ..."/>	
description	
<input type="text"/>
